# INTRODUCTION

# Foreword

In an era where capital has become increasingly selective and market dynamics are more complex, the spirit of innovation in AgriFoodTech burns brighter than ever. As we present the seventh edition of the FoodTech 500, we find ourselves at a defining moment—one where the most resilient, ingenious, and purpose-driven companies are not merely surviving but setting new standards for what's possible in our global food system.

Since launching in 2019 with a vision to identify and elevate the transformative forces reshaping food and agriculture, the FoodTech 500 has grown into the industry's most comprehensive benchmark of excellence. Our rigorous, data-driven methodology has evaluated more than 11,700 applications to date, each representing entrepreneurs and teams committed to revolutionizing how we produce, distribute, and consume food.

The 2025 edition arrives at a watershed moment for our platform and the broader ecosystem. This year marked unprecedented expansion in our reach, influence, and collaborative impact:

- Our FoodTech 500 Ambassador network grew by 12 distinguished industry leaders, creating a global consortium of experts championing innovation across continents
- We're bringing this year's official unveiling to the international stage at Gulfood in Dubai, launching a worldwide celebration that will traverse premier FoodTech capitals—from London and San Francisco to Barcelona and beyond
- Strategic government alliances deepened significantly, with partnerships spanning The Canadian Food Innovation Network, the UAE FoodTech Challenge, Korea's Agriculture Technology Promotion Agency, and Singapore's EDB, among other key institutional collaborators
- Our community surged to over 25,000 engaged newsletter subscribers and 45,000+ industry contacts

- The FoodTech Data Navigator expanded by 1,500+ companies, now tracking more than 30,000 ecosystem participants, including 12,000 operational AgriFoodTech ventures worldwide
- We executed 14 major consulting engagements—ranging from innovation scouting and accelerator programs to proof-of-concept implementations, comprehensive sector analyses, and specialized due diligence assignments
- Multiple Memoranda of Understanding with government-backed entities formalized our commitment to catalyzing regional impact across MENA, Asia, and beyond

This year's cohort emerged from over 1,200 submissions spanning 87 countries—a testament to the truly global nature of food system innovation. The 500 finalists you'll discover in these pages represent not just technological advancement, but the convergence of entrepreneurial vision, sustainability imperatives, and market readiness that defines the sector's maturation.

As we honor these exceptional companies, our commitment remains steadfast: to illuminate the path forward for those reimagining our food future and to build bridges between innovation and implementation. These pages celebrate more than the finalist companies—they chronicle the collective journey toward a more sustainable, equitable, and resilient global food system.

Welcome to the FoodTech 500, 2025.

# What is FoodTech?

“AgriFoodTech (or FoodTech) is the emergent sector exploring how technology can be leveraged to improve efficiency and sustainability in designing, producing, choosing, delivering & enjoying food.”

**AGRIFOODTECH DEFINITION, FORWARD FOODING (2019)**

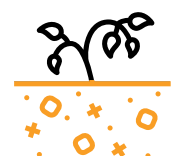

## FOOD INDUSTRY CHALLENGES

### WATER USE

**70%+**

OF THE WORLD'S FRESHWATER IS USED FOR AGRICULTURE (WDI)

### SOIL DEGRADATION

**40%**

OF GLOBAL LAND IS DEGRADED (FAO)

### GHG FROM MEAT DAIRY

**14.5%**

OF THE GHG EMISSIONS IS ACCOUNTED TO THE MEAT AND DAIRY INDUSTRY (FAO)

### MALNUTRITION

**3.15 B**

PEOPLE FACE A FORM OF MALNUTRITION (WHO)

## WHY IT MATTERS

### GLOBAL WORKFORCE

**1 B+**

AGRIFOOD PROFESSIONALS EMPLOYED (28% OF THE GLOBAL WORKFORCE)

### ECONOMIC VALUATION

**\$1.1T**

VALUE ADDED TO AGRIFOOD MANUFACTURING (FAO)

### FOOD INSECURITY

**2.3 B**

PEOPLE FACING FOOD INSECURITY (UNICEF)

### FOOD WASTE

**1/3**

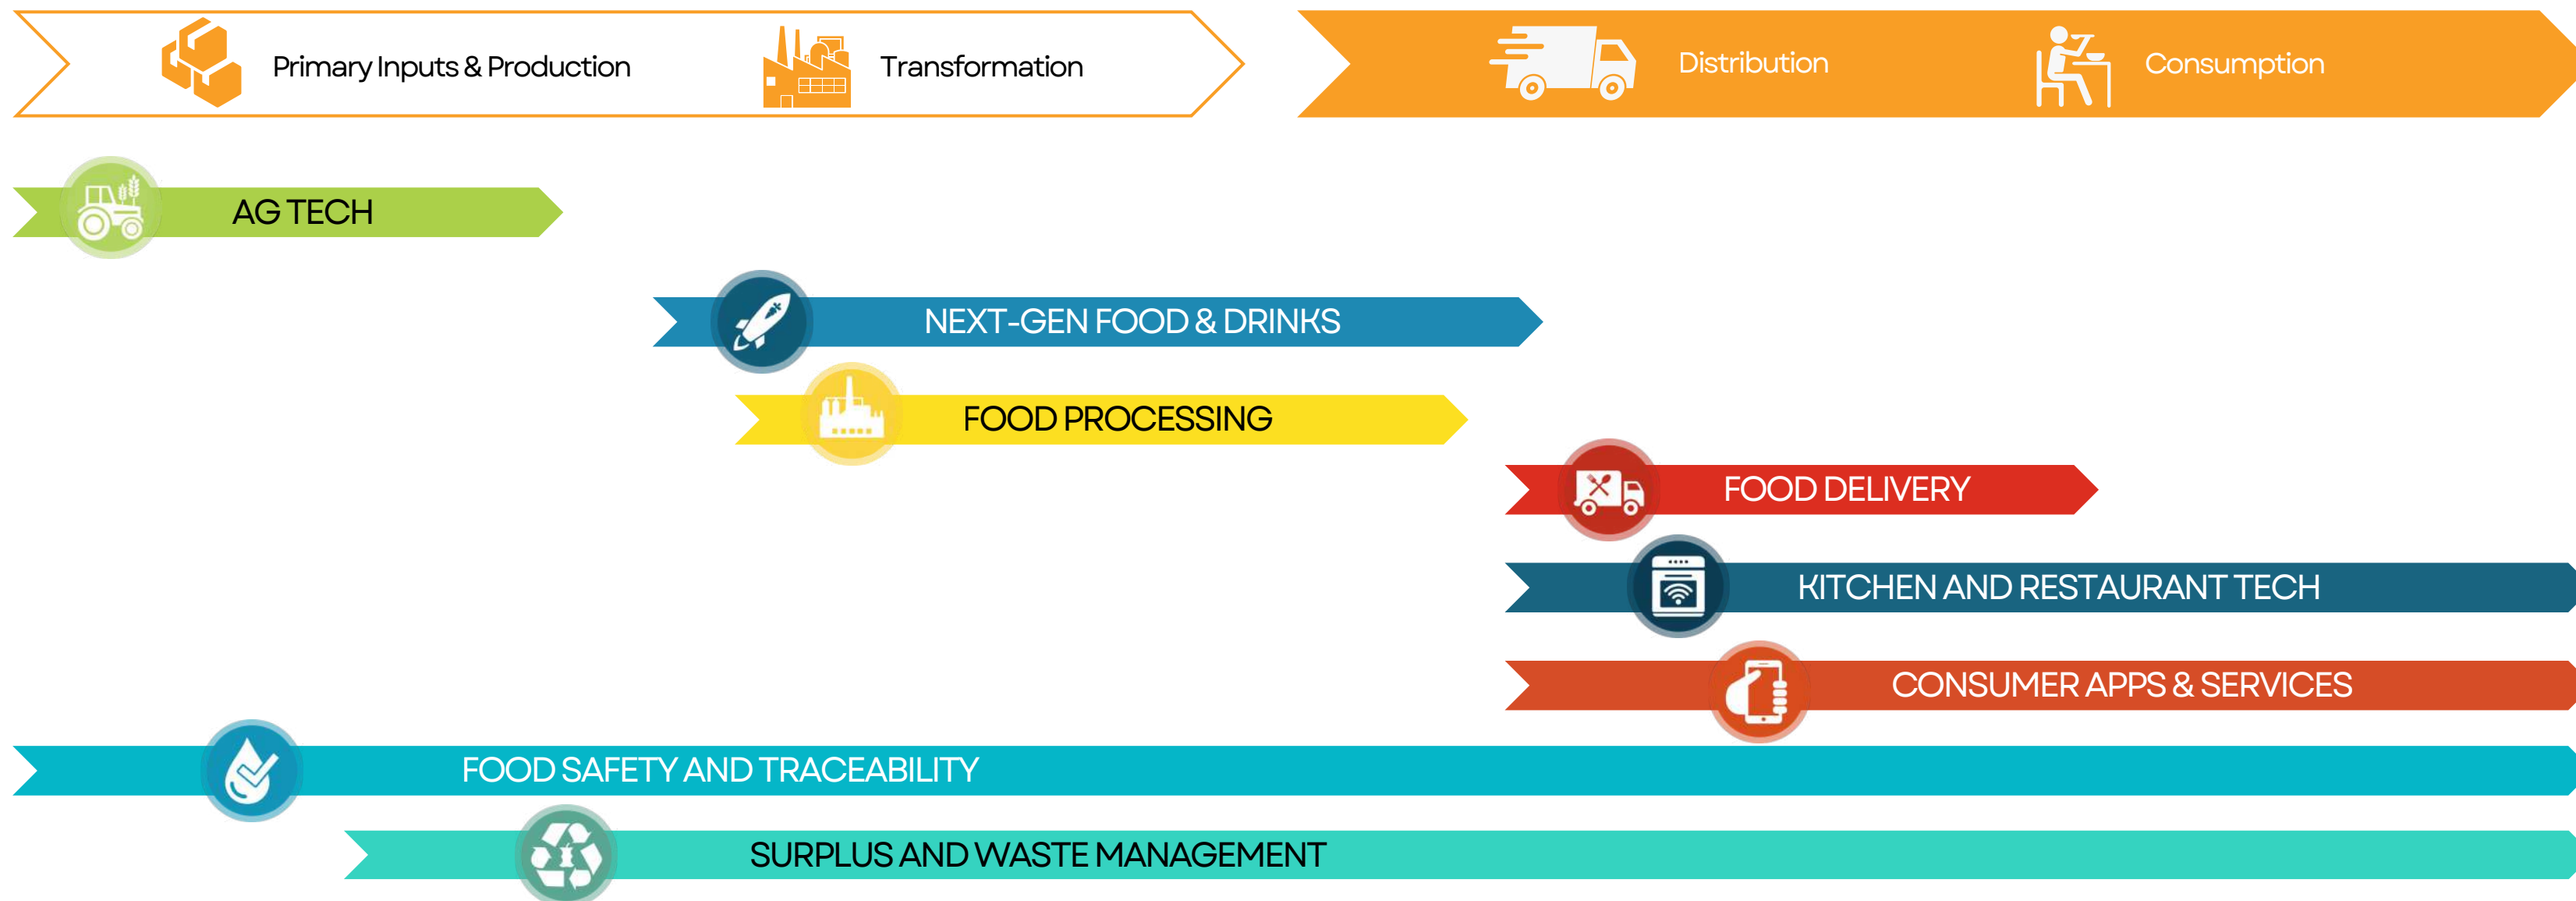

OF FOOD IS WASTED OR LOST (FAO)

# Proprietary Taxonomy

Each company within the FoodTech Data Navigator database and the FoodTech 500 list is categorised according to **8 'Macro Activities'** covering the entire food supply chain. **Activities are divided across 34 sub-vertical 'domains', and 170+ technology tags** allow us to cluster the ecosystem by technologies, business model, specific ingredients, and market applications, amongst other highly relevant parameters. This allows us to gather granular data to grasp trends and market dynamics. Click on the icons below to learn more about each Macro Activity.

# FOODTECH IN 2025

# The \$50 Billion Lesson: What FoodTech's Great Correction Tells Us About What Comes Next

*Roughly \$50 billion in capital has been destroyed across the agrifood-climate tech space since 2023. Private companies that raised billions went to zero. Public market capitalisations collapsed 90% or more. Vertical farms, plant-based meat, cultivated protein, insect facilities, carbon platforms, among others. By 2026, a good chunk of VC portfolios holding 'me-too' versions of these companies had been written off.*

Seven years of data tracking over 30,000 ecosystem actors through Forward Fooding's FoodTech Data Navigator tells a story less flattering than the one most media outlets prefer: global FoodTech investment fell 72% from its previous peak. Entire subsectors that looked like competitive markets in 2021 are now nearly empty. The correction is real, it is structural, and it is not over.

## FOOD IS NOT CODE

The single most important misunderstanding of the FoodTech boom was categorical. Investors, founders, and the ecosystem around them treated food innovation as if it operated on software timelines. Move fast. Raise big. Scale before competitors. Fix the unit economics later.

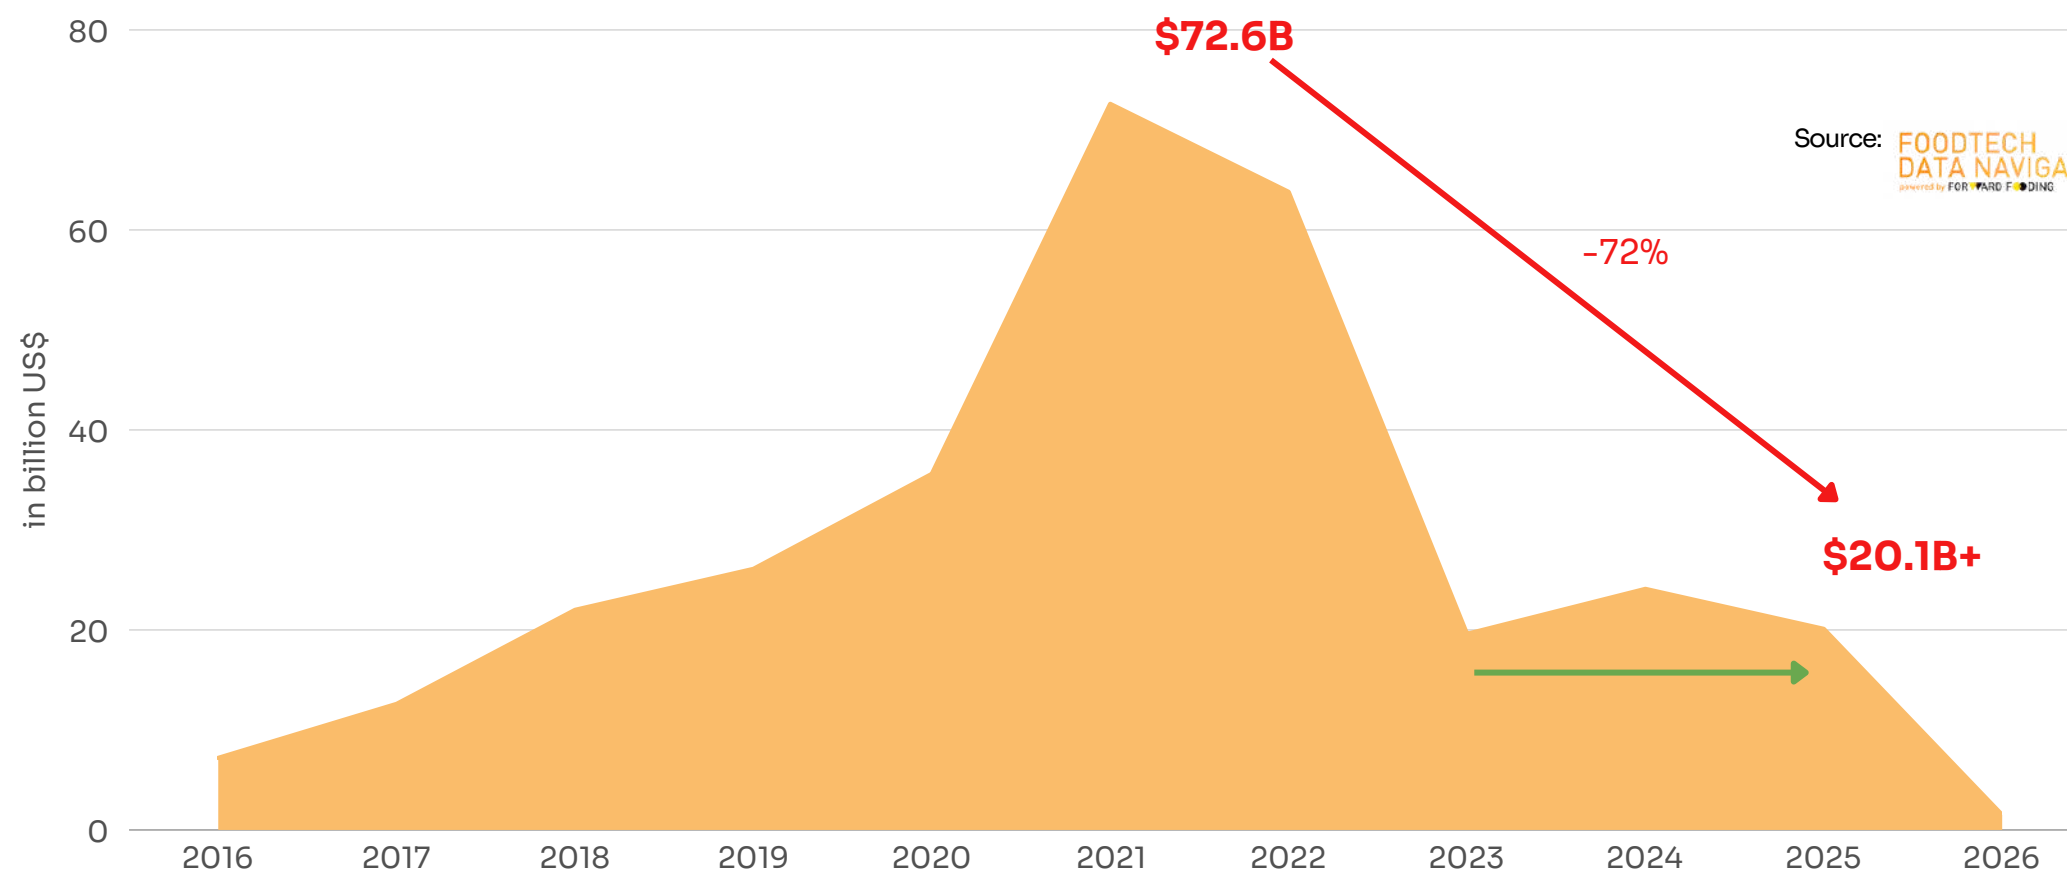

Biology, chemistry, and food safety do not work that way.

The companies that failed did so not because the science was wrong, but because the capital structure was incompatible with how long the science actually takes.

Standard VC funds run ten-year cycles with pressure to show returns by year seven or eight. The technologies being funded, cultivated protein, precision fermentation,

advanced bioprocessing require twelve to fifteen years to reach commercial viability. This mismatch was known. It was funded anyway, on the implicit assumption that an acquirer would appear before the clock ran out. When interest rates rose in 2022, the acquirers disappeared.

**AgriFoodTech Investments**  
Big Crash (aligned with global VC) or Future Rebound?

## THE FOUR PATTERNS BEHIND THE COLLAPSE

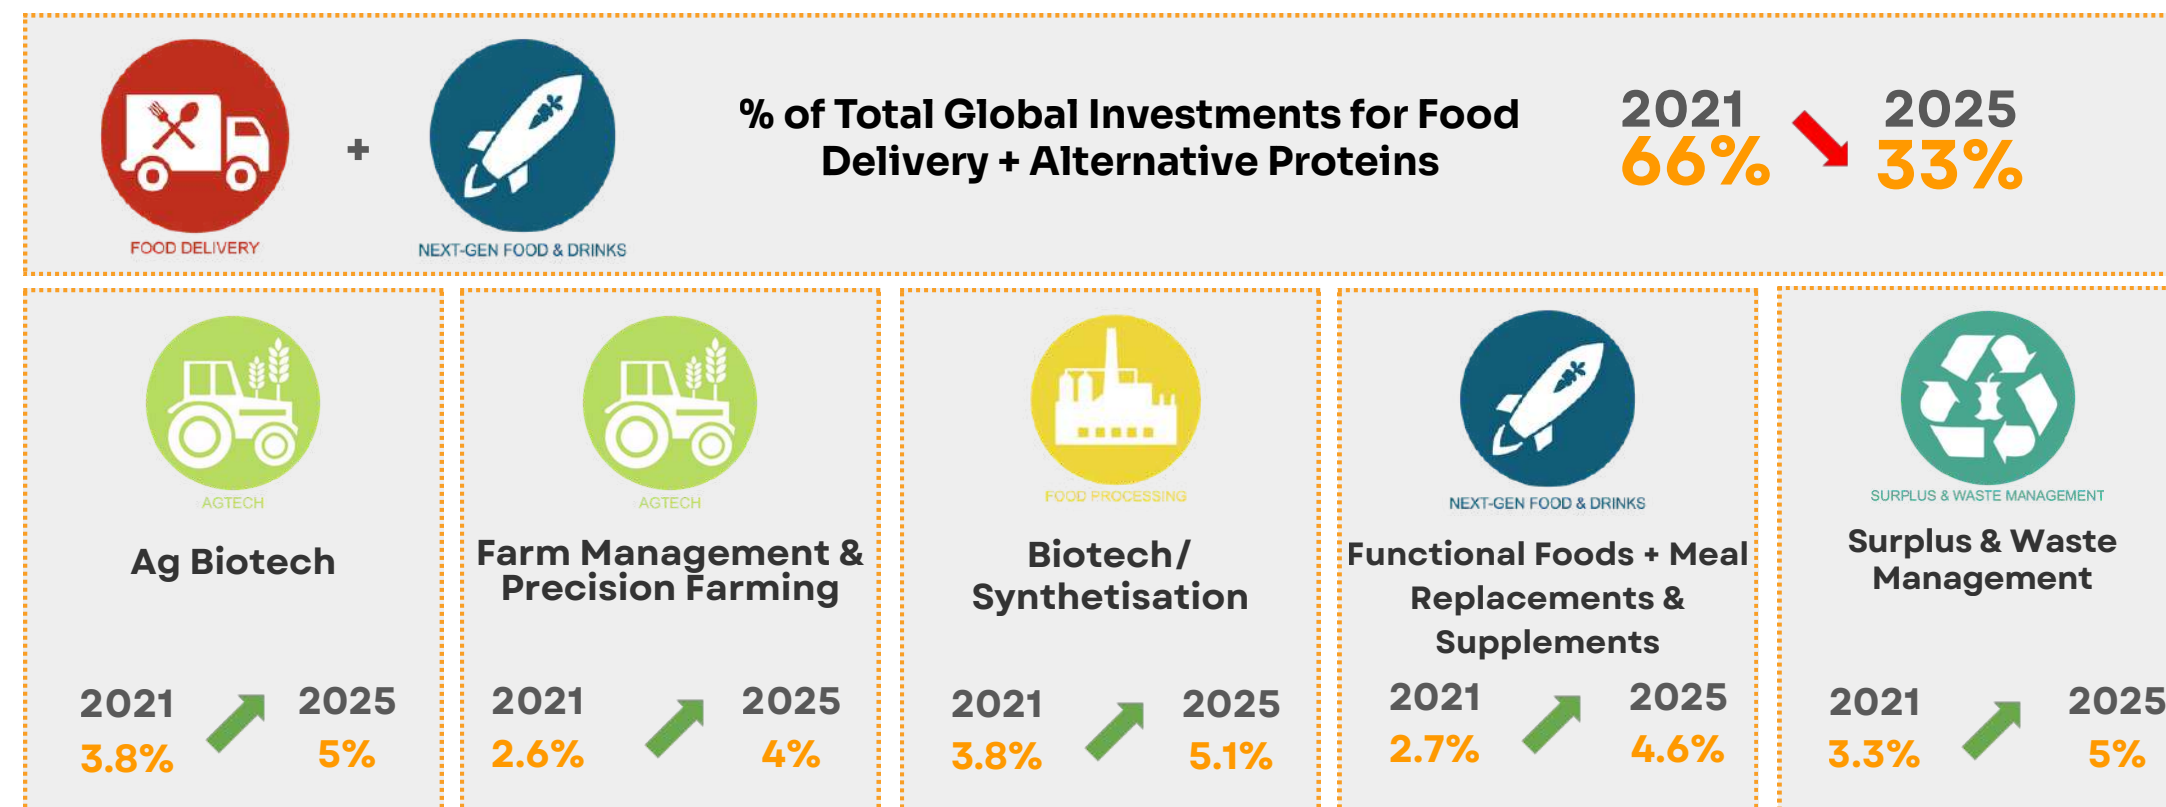

Across seven years of FoodTech 500 data and ecosystem tracking, four structural failure modes explain the majority of what went wrong. These were perfectly summarised in the [article](#) by **Eugen Kaprov** from **The New Bioeconomy**:

- **VC timelines vs. deep tech realities.** Companies that raised at peak valuations got caught in a brutal trap: too expensive to acquire, too cash-hungry for bridge rounds, too diluted to raise again. Not a technology failure. A capital structure failure.
- **Unit economics that never closed.** Vertical farms producing lettuce at \$3.07 per pound against field costs of \$0.65. Plant-based meat carrying a 20-30% consumer premium during a cost-of-living crisis. Every company that built the "world's largest" facility before proving unit economics subsequently failed. Every single one: Ynsect, Aspire Food Group, Believer Meats, Jones Food Company, AppHarvest.
- **Infrastructure exposure.** Vertical farms needed cheap electricity during an energy crisis. Eighteen companies and \$4 billion in losses later, matching technology to geography was apparently not obvious enough.
- **Demand that never arrived.** Plant-based meat sales peaked in 2021 and declined every year after. The voluntary carbon market collapsed 61% in a single year. At least twenty smaller plant-based brands disappeared with barely a headline, each one a version of the same story: supply built for demand that existed in pitch decks, not on supermarket shelves.

## THE NEW FUNDING DISTRIBUTION: 2021 VS 2025

Source: **FOODTECH DATA NAVIGATOR** powered by FORWARD FOODING

% OF GLOBAL AGRIFOODTECH FUNDING BY DOMAIN (SELECTION)

The numbers from Forward Fooding's FoodTech Data Navigator show where capital is actually going. Food Delivery and Alternative Proteins combined once absorbed 66% of all global AgriFoodTech funding. By 2025, that figure sits at 33%. That capital didn't disappear but it was reoriented. Ag Biotech's share grew from 3.8% to 5%. Farm Management and Precision Farming from 2.6% to 4%. Biotech and Synthetisation from 3.8% to 5.1%. Functional Foods and Meal Replacements from 2.7% to 4.6%. Surplus and Waste Management from 3.3% to 5%.

The key shift we are noticing is an **increased focus towards Upstream technologies and Circular economy**, while most of the downstream and consumer-facing domains are declining. in proportion.

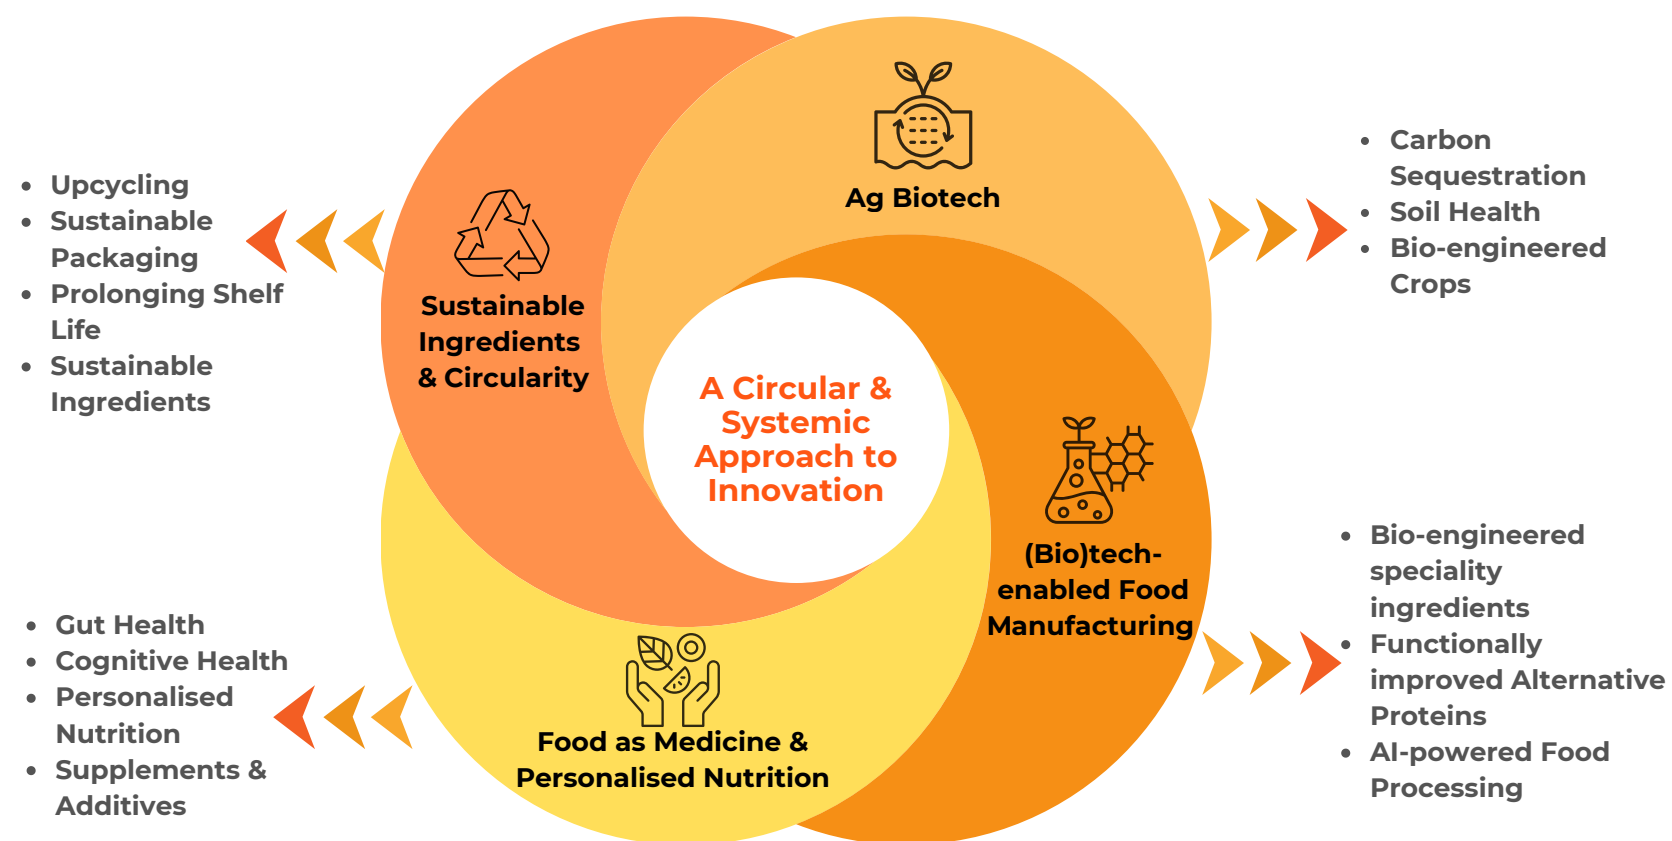

The pattern holds across two consecutive years of our data, which reflects a genuine recalibration of where investors believe durable value gets built in the food system.

That reallocation is not accidental. It tracks directly with the failures of Wave 2.0: the CAPEX-heavy, behaviour-change-dependent models that ran out of runway before the market arrived. What's replacing them is a fundamentally different logic: **solve problems that already have buyers, at a point in the value chain where the economics don't depend on convincing a consumer to pay a premium.**

## FOODTECH WAVE 3.0: INTEGRATION OVER DISRUPTION

**Wave 1 was platforms:** delivery, discovery, convenience. **Wave 2 was disruption:** replace meat, replace farming, replace the supply chain. The new evolving funding distribution helped identify last year, and even more relevant this year, what we like to call **the 'FoodTech Wave 3.0'**, and its 4 pillars:

### FoodTech Wave 3.0: A Circular & Systemic Approach to Innovation

**Wave 3 is about integration:** work within existing systems, target B2B before B2C, build for the food supply chain rather than against it. The surviving companies are asset-light, B2B-first, backed by patient capital. We believe four main things will allow to drive this agenda further:

- **Patient and blended capital.** Seven-year VC timelines don't match FoodTech development cycles. Strategic co-investors like Cargill, ADM, and DSM do. Public-private, milestone-based funding is now the appropriate tool, not the exception.
- **Pragmatic integration.** Lead with economic value; build sustainability in as a feature. The voluntary carbon market collapse is what happens when value depends on policy commitment rather than direct economic benefit.
- **Leaner regulation.** Multi-year approval cycles are a design choice, and they are killing viable companies. Regulatory sandboxes are the difference between innovation and the valley of death.
- **Meaningful partnerships.** Defined milestones. Acquisitions that bring technology inside established distribution. Empty MOUs are increasingly visible for what they are.

## THE WORK THAT REMAINS

The problem FoodTech was built to solve hasn't gone anywhere. The global food system still needs to feed a growing population with a shrinking resource base and an increasingly unstable climate. The scientific capabilities, precision fermentation, bioactive ingredients, agricultural biotechnology, food waste valorisation, are real and improving. What died was a specific, venture-fuelled, consumer-facing version of how to get there fast.

What remains is harder, slower, and more grounded. It requires founders who understand the difference between a compelling narrative and proven unit economics, and investors with time horizons that match the technology.

The next decade of FoodTech will be built by people who can hold both truths at once: the urgency of the problem, and the patience the solution actually demands.

[Click here to read our complete analysis and review of the 2025's FoodTech landscape](#)

# Revenue Is the New Baseline. What Comes Next? The FoodTech 500 Ambassadors Weigh In.

96% of this year's FoodTech 500 finalists have received investment, 80% are already revenue-generating (up from 74% in 2024), and representation is at record highs with 38% female-founded and 26% BAME-founded companies. The hype cycle is unambiguously behind us. What's less clear, and what our Ambassadors help illuminate, is what comes next.

## THE "FLIGHT TO QUALITY"

**Dr. Balaji Vasudevan** puts it directly: "The science worth betting on rarely fits a clean commercialization timeline. The startups that could genuinely change how the world eats—the **real moonshots**—often look unbankable at Series A by today's standards.

"I'm not saying revenue doesn't matter. Of course it does. But if the entire ecosystem — investors, corporates, accelerators — optimizes purely around capital efficiency, we'll **slowly defund the kind of science that takes a decade to matter** and then matters enormously.

What we actually need is **more honest conversation about what different capital vehicles are for**. Corporate strategic investment, government innovation funding, and philanthropic science bets all have a role here that pure VC was never designed to play. **Revenue is a vital sign. It shouldn't become the only one.**"

## HOW TO FUND WHAT VC WAS NEVER BUILT FOR?

In this capital-efficient era, what should founders know about funding mix and non-funding operations?

**Antonio Iannone** distils it to a single principle: "separate science risk from scale risk. Prove willingness to pay before building infrastructure, **stay asset-light** longer than feels comfortable, and **own the IP**, not the concrete."

## WHY AGTECH AND FOOD PROCESSING ARE WINNING

Ambassadors have observed the pivot highlighted by our data, where there is a clear increase in AgTech and Food Processing versus a drop in Food Delivery and Plant-based Proteins.

**Dr. Elif Güngör Reis** points to a pragmatic angle: upstream segments "allow **faster validation, clearer ROI, and more direct value creation**. Investors are prioritising areas where validation cycles are shorter, regulatory pathways are clearer, and competitive intensity is more manageable. This pivot feels less ideological and more driven by speed, scalability, and execution feasibility."

## READING THE DOMAIN DIVERGENCE

Interpreting the shift in growth from Plant-based and Vertical Farming to Biotech/Synthesiation, Ag Biotech, and Upcycled Ingredients.

**Daniel Skavén Ruben** is direct: the lesson of the downturn in both sectors is simply that they "**over-promised and under-delivered.**" No further elaboration needed. The market already priced it in.

**Mary van Hoek-Hendriks** reframes the whole trajectory: "The hype around plant-based and vertical farming was necessary, it attracted capital, talent, and public attention, and accelerated technological learning. It helped build the infrastructure, consumer awareness, and scientific capability we have today. **What we're seeing now is not collapse, but consolidation. Hype creates momentum; maturity creates impact.**"

**Sascha Dutta** is particularly bullish on upcycled ingredients: "There are still so many things that get discarded which could be reused for something else. The benefit of these businesses is that **raw materials tend to be cheap, but it's the technology to process them that costs the money.**"

## COMPANIES TO WATCH: THE AMBASSADORS' PICKS

- **Enough** - for building the “picks-and-shovels” that every alt-protein company needs
- **GreenLigh Biosciences** - for RNA crop protection that delivers pest control with zero pollinator impact
- **Kokomodo** - for cell-based cocoa, which climate-proofs chocolate
- **Coccola** - for sugar reduction (rides a major macro-trend with strong marketing)
- **Lembas** - for GLP-1-friendly ingredients
- **California Cultured** - for its cell-based cacao approach
- **Omni Pet** - for bringing alternative protein innovation into the pet food category
- **Mui Robotics** - for its AI sensory tech for food quality and freshness detection
- **UniFAHS** - for its phage-based innovations for animal health and antibiotic reduction
- **Pacton Technologies** - for its FishSpeak platform that helps with aquaculture yield and fish health
- **Ondo Solutions** - for its data-driven optimisation, monitoring, and predictive analytics for agriculture
- **Ancestral Superfoods** - for its focus on nutrient density, regenerative sourcing, and functional health impact for its alternative ingredients
- **Smart Farm Robotics** - for its integrated robotics and AI systems that will reshape farm economics and productivity models

## DIVERSITY AT RECORD HIGHS, BUT MENTORSHIP ISN'T ENOUGH

**Melissa Ong** frames the Southeast Asia picture around market access: “Many female and minority-led startups are revenue-driven from early stages, but scaling them into global leaders requires structured corporate partnerships that provide **pilot opportunities, manufacturing access, and regional distribution channels**. The next phase is about moving from inclusion to scale.”

## THE TECH OF 2026: WHAT TO ACTUALLY WATCH

Which technology or sector do you expect the biggest FoodTech breakthrough or advancement in 2026?

**Mariya Hristova** sees three converging areas: **soil health** moving from “sustainability narrative to measurable performance driver,” **carbon farming** gaining credibility through better MRV technology, and **longevity-focused food** moving from niche to mainstream — “products that combine scientifically validated bioactives with clean formulation.”

**Juan Pablo Orlov** focuses on AI but with an important qualifier: “The real breakthrough comes from **pairing high-quality data and scientific judgment with AI to make better predictions** in areas that still rely heavily on guesswork today.” The AI without the domain expertise is noise. The combination is a signal.

## WHAT DIDN'T MAKE THE HEADLINES BUT SHOULD

Four observations kept surfacing across the additional comments, each one worth sitting with.

**The fragmentation problem:** “Founders struggle less with technology and more with access, slowing scale more than science does.” - Mariya Hristova

**Corporates replacing VC:** “As venture capital becomes more selective, large food and agriculture players will increasingly shape innovation.” - Dr. Elif Güngör Reis

**Trends vs. execution:** “The future of FoodTech will not be built by trends — it will be built by execution.” - Dr. Elif Güngör Reis

**Overlooked regional dimension:** “Southeast Asia will play a larger role as a real-world deployment hub for scalable FoodTech solutions, offering a powerful testbed for practical, cost-efficient, and impact-driven technologies.” - Melissa Ong

# ABOUT THE FOODTECH 500

# Overview

Drawing inspiration from the prestigious Fortune 500, the FoodTech 500 compiles the definitive list of the most innovative global businesses at the convergence of food, technology and sustainability.

The mission of the FoodTech 500 is to highlight the foremost innovators worldwide within the AgriFoodTech ecosystem, spanning from farm to fork. These entrepreneurs and their ventures are pioneering solutions to enhance the global food system.

Now in its seventh edition, this global initiative offers a comprehensive view of the current state of food technology by featuring the latest advancements from international startup and scaleup companies throughout the entire supply chain.

# Methodology

To determine this ranking, we applied the FoodTech Data Navigator's proprietary algorithms to data submitted through each company's application, generating a business size score and a digital footprint score.

Each company's sustainability performance was assessed separately through a questionnaire developed in collaboration with sustainability experts, taking into account the Sustainable Development Goals the companies are actively working towards.

## BUSINESS SIZE SCORE

The business size score is generated through a proprietary algorithm that predicts growth potential based on key financial indicators, including number of employees, funding stage, total funding raised, and number of markets addressed.

## SUSTAINABILITY SCORE

We collaborated with sustainability experts from the Department of Management at the University of Turin to develop a survey and scoring framework built around selected Sustainable Development Goals defined by the United Nations.

## DIGITAL FOOTPRINT SCORE

The digital footprint score is likewise produced through a proprietary algorithm, measuring predicted growth in digital presence based on website traffic, social media performance, and follower growth.

## DETERMINING THE FINAL RANKING

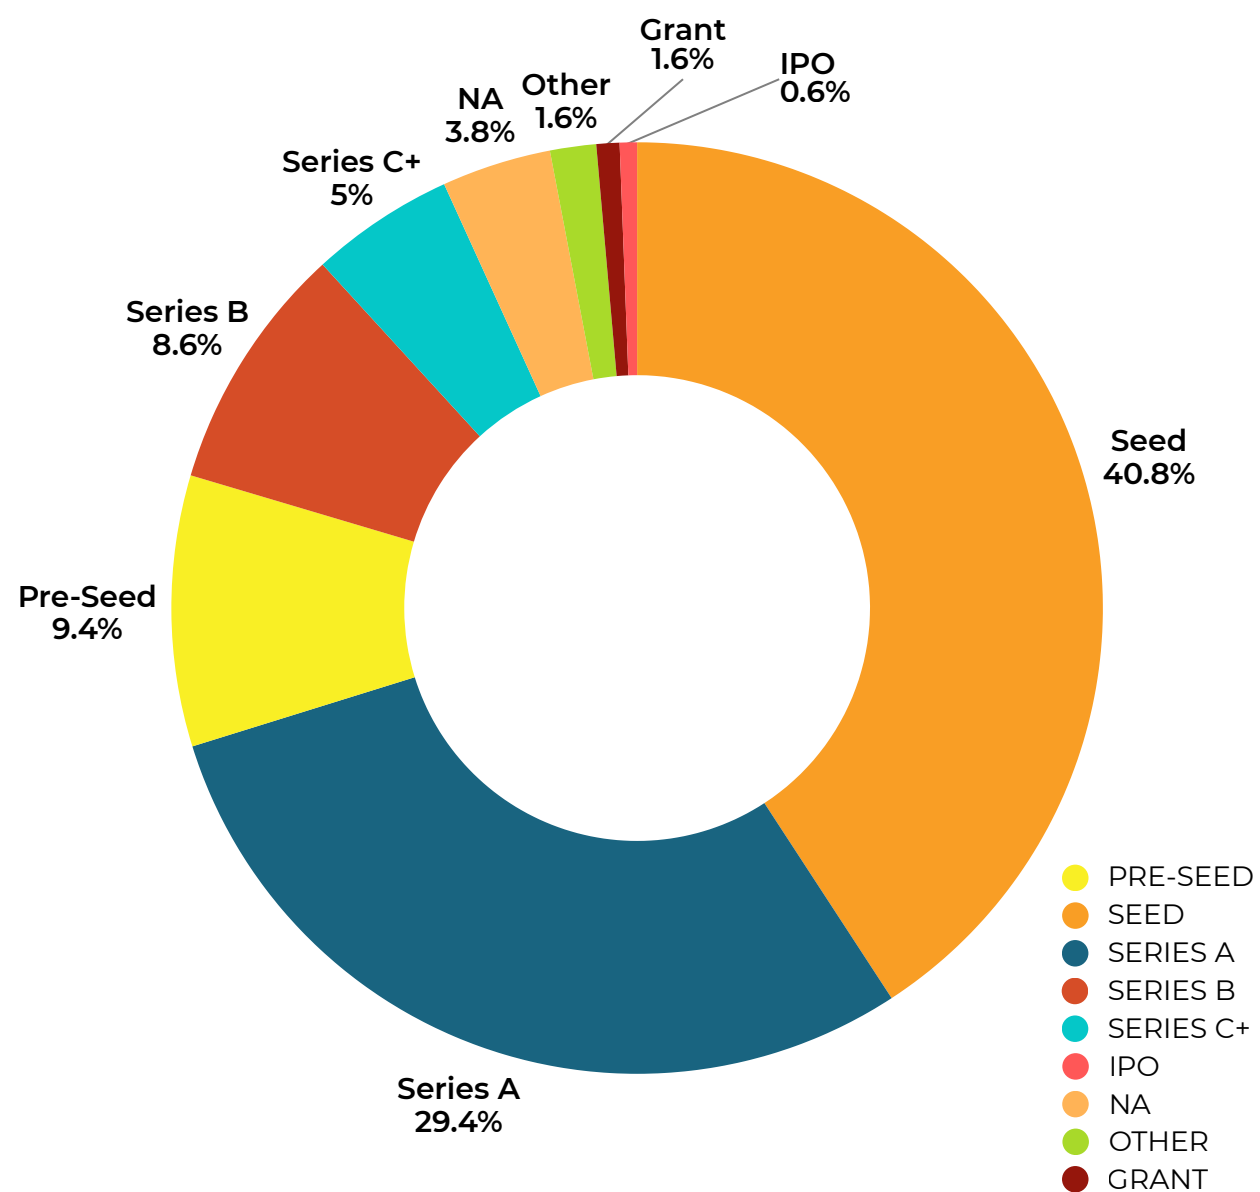

The three scores were combined to produce a total score out of 300 for each company, which determined their ranking both on the overall list and within specific AgriFoodtech categories.

# The 2025 FoodTech 500 Finalists in Numbers

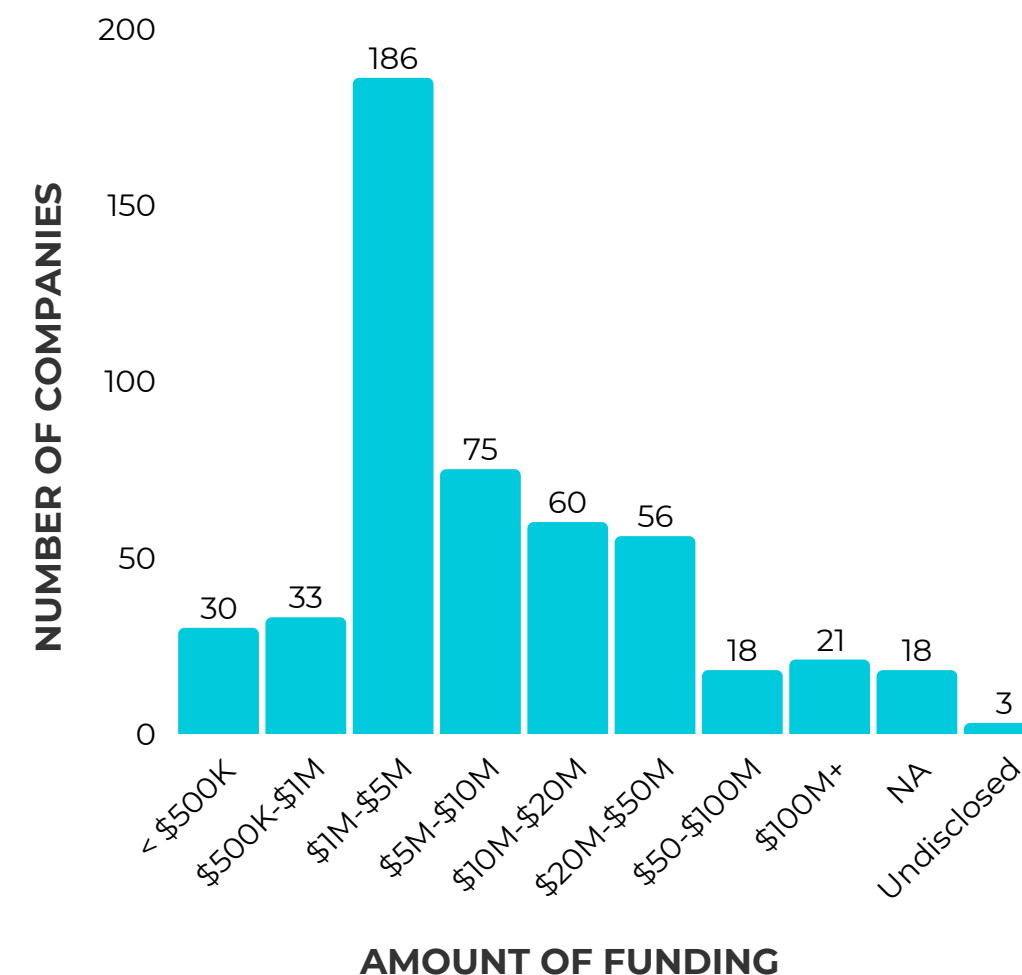

## 2025 FINALISTS AT A GLANCE

- 8.4B USD** TOTAL FUNDS RAISED OVER TIME
- 80%** REVENUE-GENERATING COMPANIES (400 out of 500)
- 96%** COMPANIES RECEIVED INVESTMENTS (481 out of 500)

- 45** B-CORP COMPANIES
- 6** PUBLICLY LISTED COMPANIES
- 29** DOMAINS REPRESENTED IN THE LIST
- 726** NUMBER OF PATENTS FILED

## FUNDING STAGE

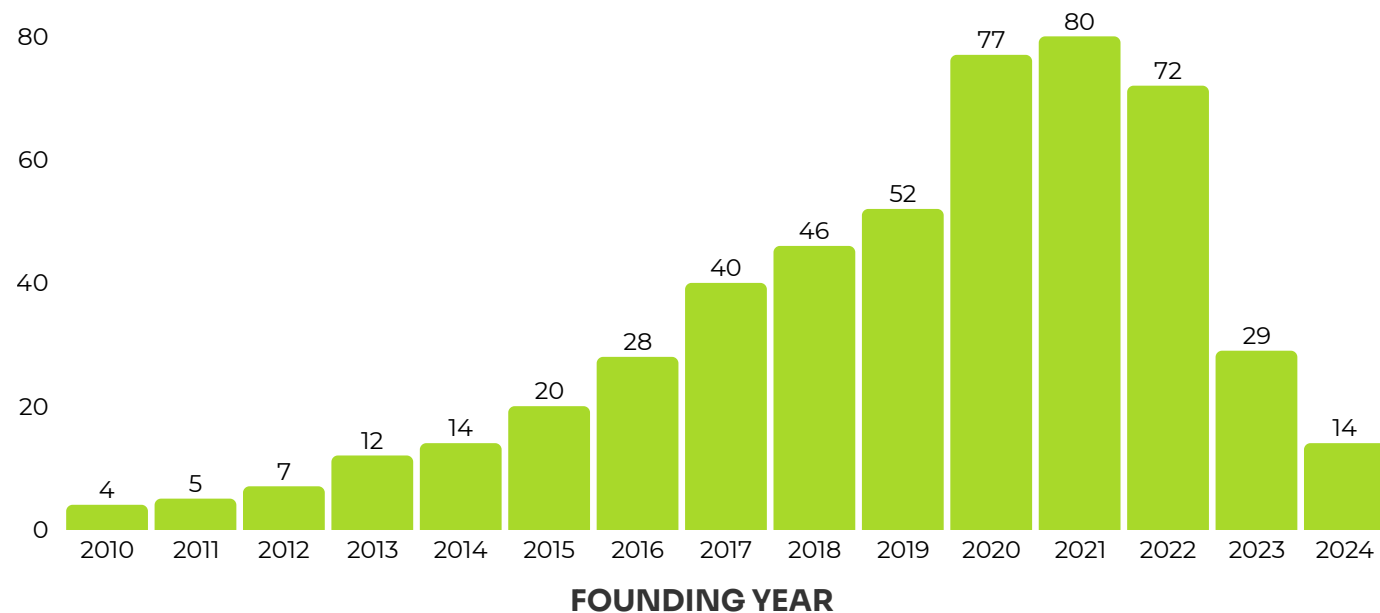

## SPLIT BY AMOUNT OF FUNDING

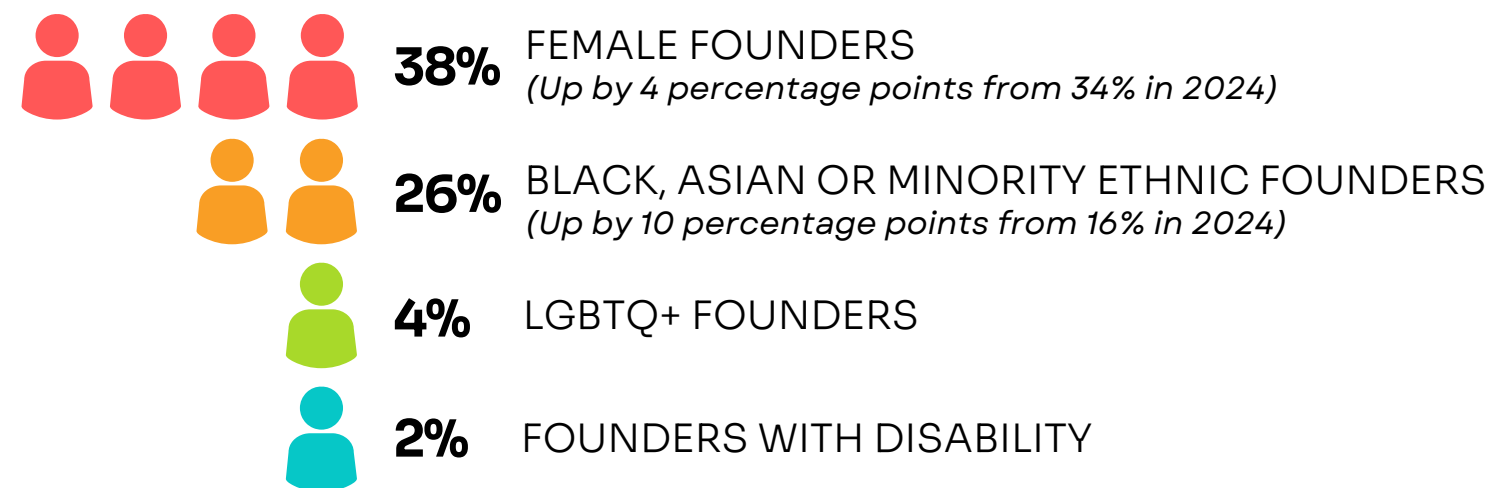

# The 2025 FoodTech 500 Finalists in Numbers

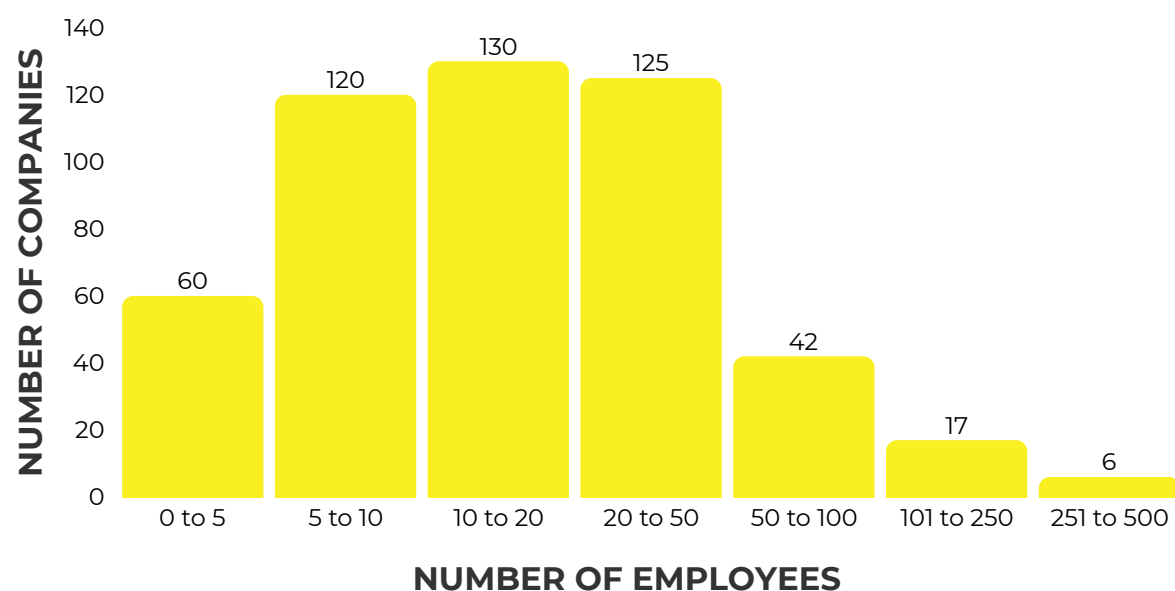

## FOUNDING DATES

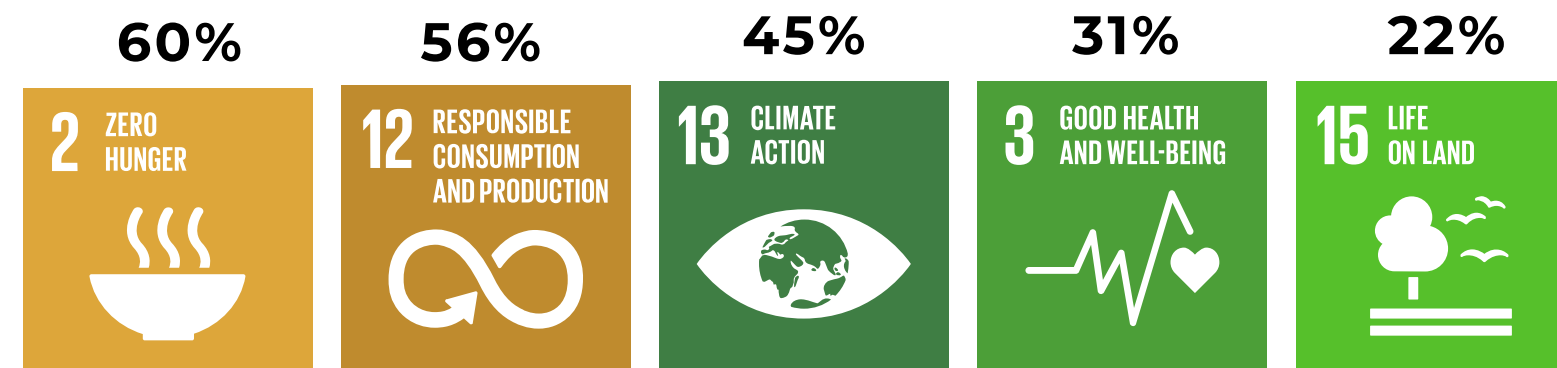

## FOUNDING/ LEADERSHIP TEAM

## AVERAGE NUMBER OF EMPLOYEES

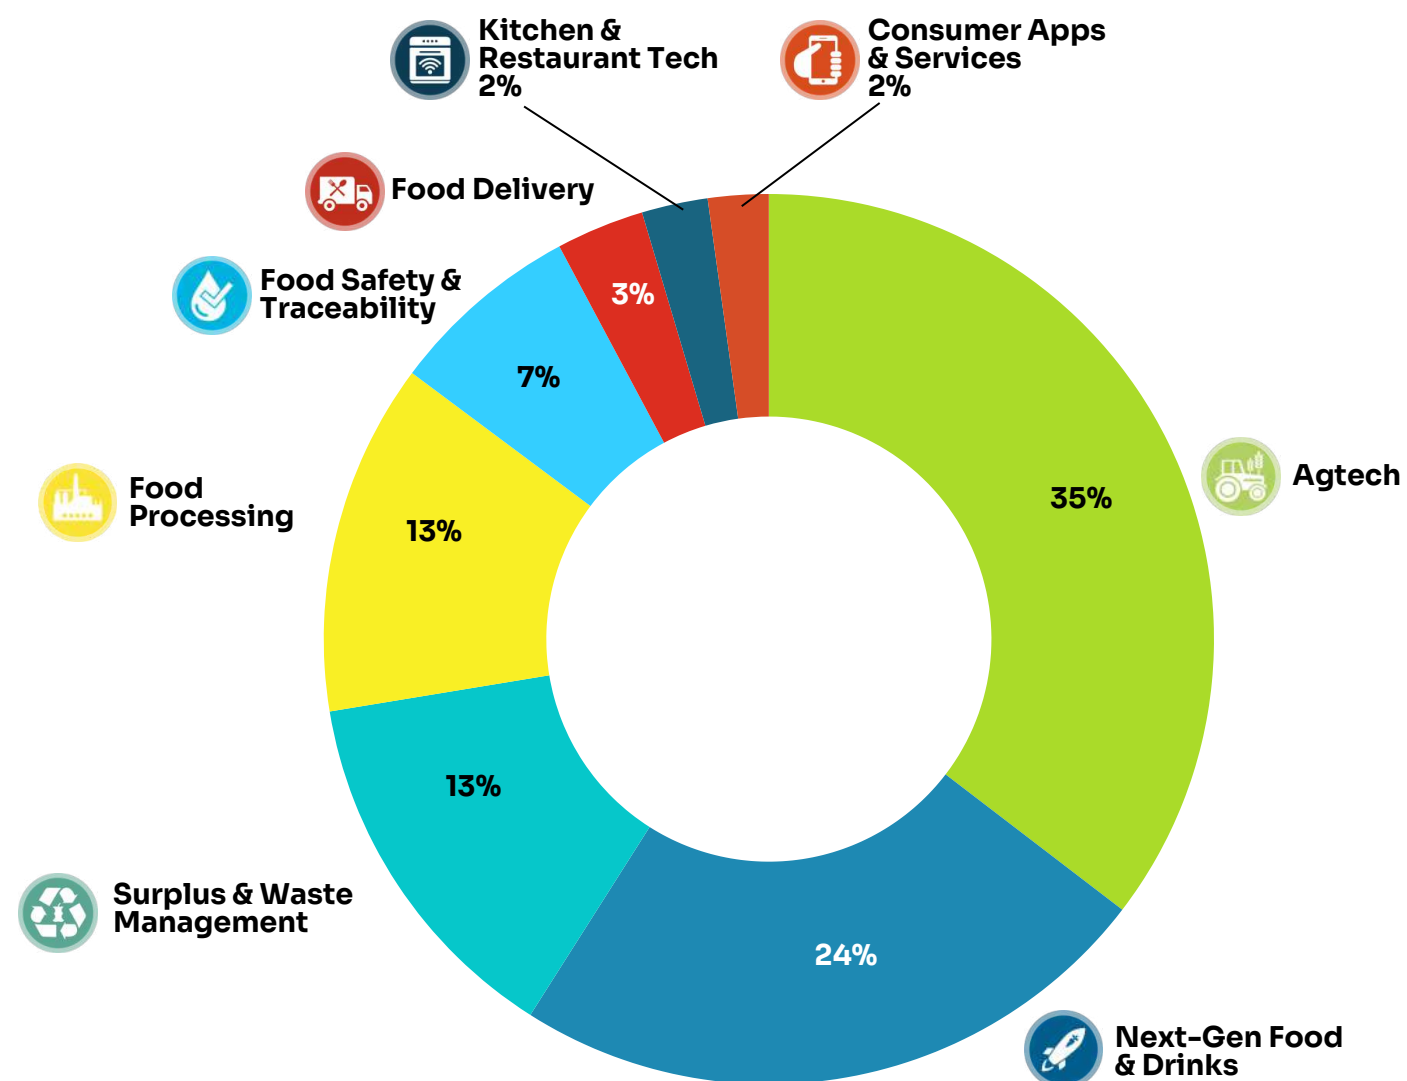

## TOP 5 MOST TACKLED SDGS (% Count by Company)

# The 2025 FoodTech 500 Finalists in Numbers

## SPLIT BY ACTIVITIES

## TOP 10 DOMAINS

- **FARM MANAGEMENT & PRECISION FARMING** (63 COMPANIES)
- **BIOTECH/ SYNTHETISATION** (51 COMPANIES)
- **AG BIOTECH** (48 COMPANIES)
- **PLANT-BASED** (36 COMPANIES)
- **VERTICAL & INDOOR FARMING** (34 COMPANIES)
- **PROTEIN FERMENTATION** (32 COMPANIES)
- **UPCYCLED INGREDIENTS, FOOD SURPLUS & WASTE EFFICIENCY** (30 COMPANIES)
- **CELLULAR AGRICULTURE** (28 COMPANIES)
- **FOOD WASTE TECH & FOOD SHARING PLATFORMS** (27 COMPANIES)
- **FOOD SAFETY & QUALITY** (19 COMPANIES)

# What have we learned in 2025?

The market has bottomed out. After a brutal 73% funding drop from 2021's peak, 2025 signals stabilization rather than recovery. Looking at the finalist companies of the 2025 edition of the FoodTech 500, one side of the story is emerging: the industry is maturing, diversifying, and doubling down on what works.

## THE SELF-SUFFICIENCY SIGNAL

The most telling shift is behavioral, not financial. **96% of the FoodTech 500 companies raised external funding** (down from 99%), **while 80% are now revenue-generating** (up from 74%). The era of "growth at all costs" is over. Capital efficiency is the new competitive advantage.

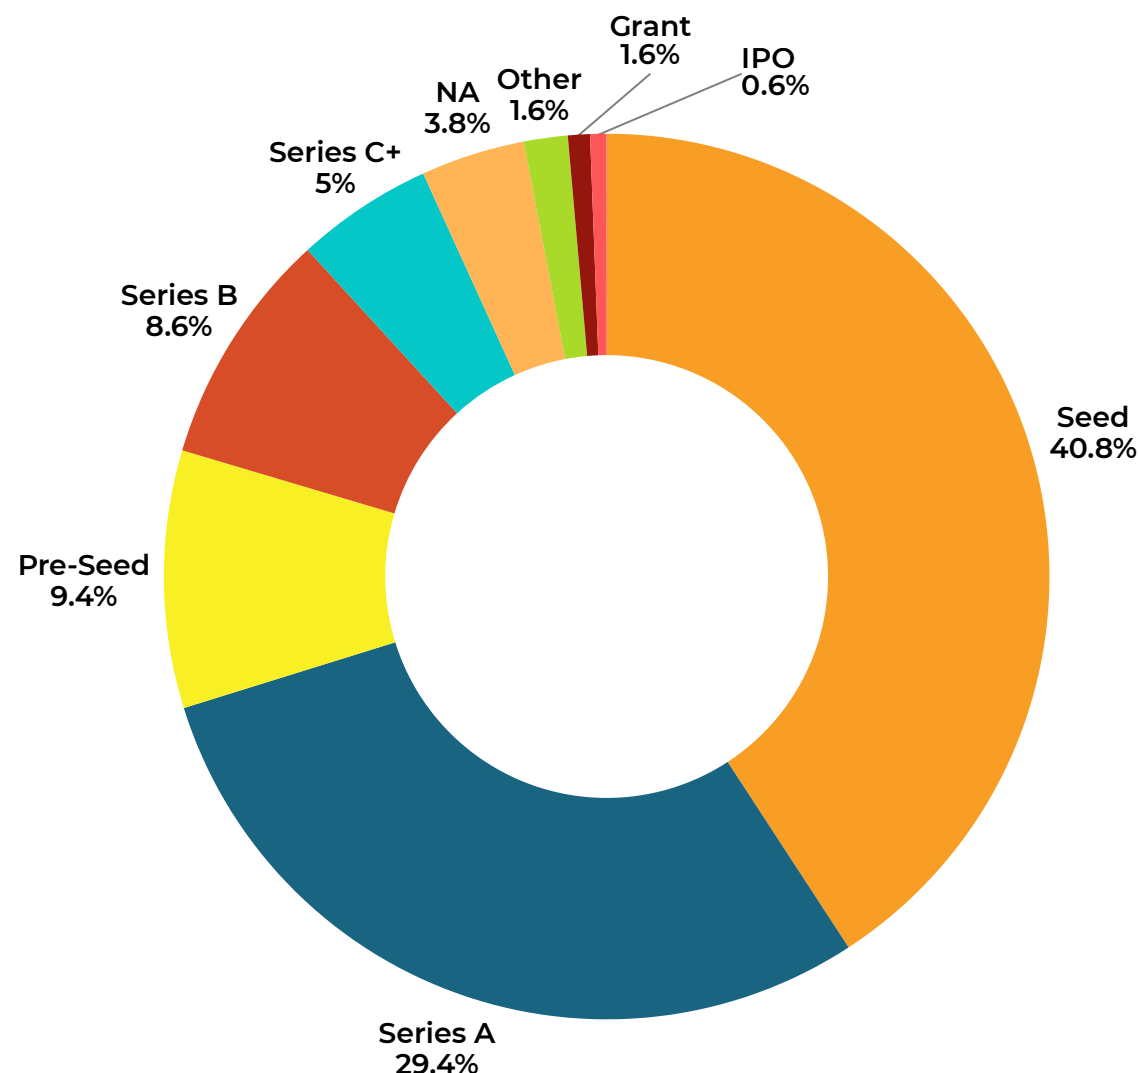

## FUNDING ARCHITECTURE EVOLVES

The distribution across funding stages reveals how capital moves through a maturing ecosystem:

- **Pre-seed expands to 9.4%** (from 8.2%), suggesting angel and micro-VC activity compensating for institutional pullback.
- **Seed rounds hold steady at 40.8%** (vs 41.8% in 2024), remaining the backbone.
- **Series A contracts sharply to 29.4%** (from 34.2%), as "Series A 'crunch' intensifies."
- **Late-stage (Series C+) grows to 5%** (from 4.6%), as proven models continue attracting capital.

The pattern is clear: early-stage funding remains available for strong teams with differentiated technology. But the bridge to growth capital has narrowed significantly. Only companies proving revenue traction and unit economics are crossing it.

FUNDING STAGE 2025 FINALISTS

## THE VALUE CHAIN REBALANCES UPSTREAM

AGTECH

SURPLUS & WASTE MANAGEMENT

**Agtech** widens its lead to 35.4% (177 companies, up from 32.6%/ 163 companies), while **Next-Gen Food & Drinks** contracts to 23.6% (118 companies, down from 27.6%/ 138 companies). Notable numbers at the domain level:

- **Farm Management & Precision Farming:** #1 with 63 companies (+21% from 52 companies in 2024)
- **Ag Biotech:** #3 with 48 companies (+14% from 42 companies in 2024)
- **Vertical Farming:** with 34 companies (+21% from 28 companies in 2024)
- **Surplus & Waste Management** grows with 67 companies (+29 from 2024)

The 2025 FoodTech 500 features companies building infrastructure that prevents problems (**upstream agtech**) and captures existing value (**waste/surplus**), while **pulling back from** technologies requiring consumer behavior change or regulatory breakthroughs (**downstream food innovation**).

## DIVERSITY AND GENDER BALANCE ON THE RISE

**Black, Asian, or Minority Ethnic (BAME) founders surge to 26%** (from 16% in 2024), and **38% female founders** for this FoodTech 500 edition. This demonstrates that diverse teams outperform in constrained markets.

Our 2025 FoodTech 500 data represents progress and also a structural funding barrier for women founders that cannot be ignored. Despite clearing the same innovation hurdles as their peers, **female founders face a persistent "access gap" that widens at later stages:**

**The Median Gap:** Female-founded finalists raised a median of \$2.76M, nearly half the \$5.17M raised by others in the same cohort.

**The Series B+ Barrier:** Only 6.8% of female-founded companies in the FoodTech 500 reached Series B or later, compared to 17.1% of their counterparts.

**Global Disparity:** In 2024, all-female founding teams received just 2.3% of total global VC, with that figure dropping to a staggering 0.5% in Europe.

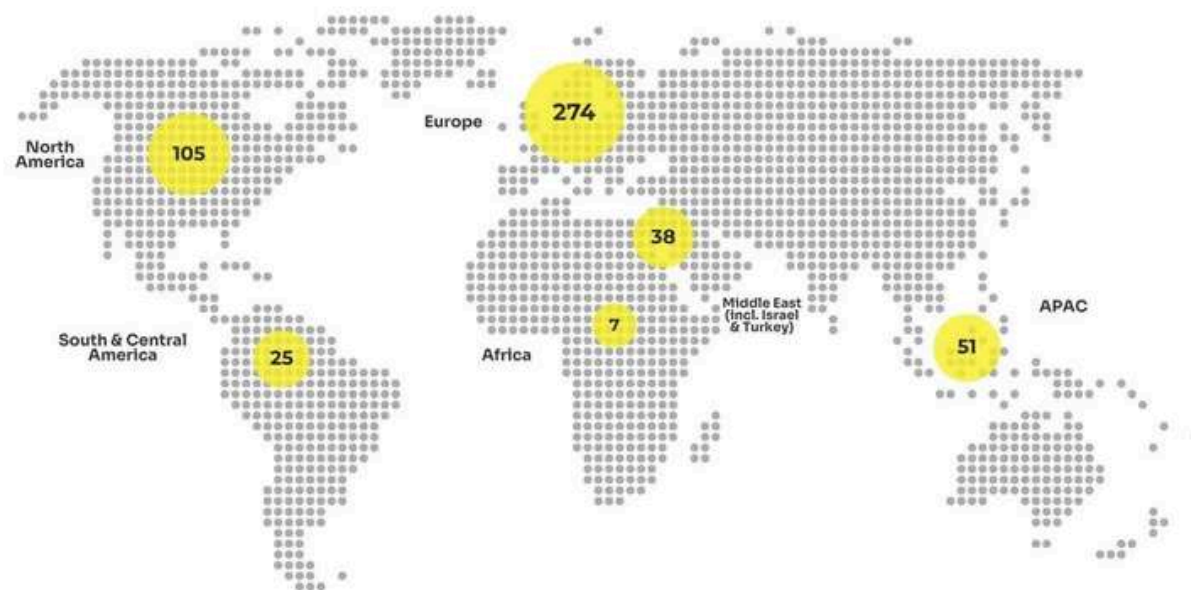

Across all industries, including AgriFoodTech, VCs and other funding vehicles and initiatives that support women and mixed-gender teams are needed. But more importantly, equal access to the main one.

This funding cliff is structural and discriminatory.

 [Click here to read the Women in AgriFoodTech: Milestones and the Funding Cliff Ahead](#)

## EUROPE IS LEADING THE PACK

**Europe 54.8% (274 companies)** vs US 88. Policy support for ag innovation and circular economy drives European dominance.

## FOUNDERS TOP CHALLENGES REVEAL MARKET REALITIES

The top challenges haven't changed, but their intensity has. The #1 challenge for founders is **Fundraising** (244 responses; ↑ from 211 in 2024), # 2 is **Seeking Strategic partnerships** (221 responses; ↑ from 181), and #3 is **Scaling production**, with manufacturing economics challenges.

### WHAT THIS MEANS FOR 2026

The industry is splitting into two paths: **Path A (Capital-efficient builders):** Revenue-first companies using grants, strategic partnerships, and smaller VC rounds to reach profitability. **Path B (Capital-intensive deeptech):** Only category leaders with breakthrough IP.

**2026 will be defined by who has mastered capital efficiency, secured strategic partnerships, and aligned with macro tailwinds** (climate adaptation, waste valorization, supply chain resilience).

# CREDITS

# FoodTech 500 Official Sponsor

For the second year in a row, Forward Fooding is pleased to welcome pladis as Official Sponsor of the FoodTech 500!

## ABOUT PLADIS

**pladis** is a global snacking company with a simple purpose: bringing happiness with every bite.

We are home to many of the world's most loved snack brands, including McVitie's, GODIVA and Ülker, along with local favourites such as Jacob's, Flipz, BN, Verkade and Turtles. From biscuits and wafers to cakes and chocolate, our products are part of millions of everyday moments around the world.

Our heritage stretches back to 1831, uniting generations of baking and confectionery craft. As stewards of this legacy, we continue to evolve our products so they remain relevant, responsible and enjoyed for years to come.

Today, our 16,000 colleagues across 27 factories in 11 countries stay close to the markets and communities we serve—turning consumer insight into snacks people know, trust and enjoy.

## THE ACCELERATOR PROGRAMME

Launching in 2026, the pladis Accelerator Programme—powered by Yıldız Ventures—supports early-stage companies who are shaping the future of food.

As a company that has grown quickly since our formation in 2016, pladis understands what it takes to start and scale at pace. Through the Programme, selected startups gain access to mentorship from senior leaders across R&D, procurement and commercial functions, along with opportunities to explore pilot projects and co-development work.

Stay tuned for the official announcement of the pladis' Accelerator Programme!

# Credits and Media Partners

The 2025 FoodTech 500 was led by the multidisciplinary team of Forward Fooding, under the direction of its founders, Alessio D'antino and Max Leveau. The following individuals have collaborated to bring to life this year's annual ranking: Enrico Rivara for the website updates and Jennibeth Paglinawan for content development, analysis, and project coordination for the FoodTech 500 campaign and white paper alongside her team of writers, marketers, and designers at Growth Holistics, including Kristine Lucas, Regine Lumandas, Catherine Lim, Rhomina Legaspi, and Inna Anchinges, has been instrumental in executing the content, design, and marketing of the 2025 edition, helping to ensure the success of the seventh edition of the FoodTech 500.

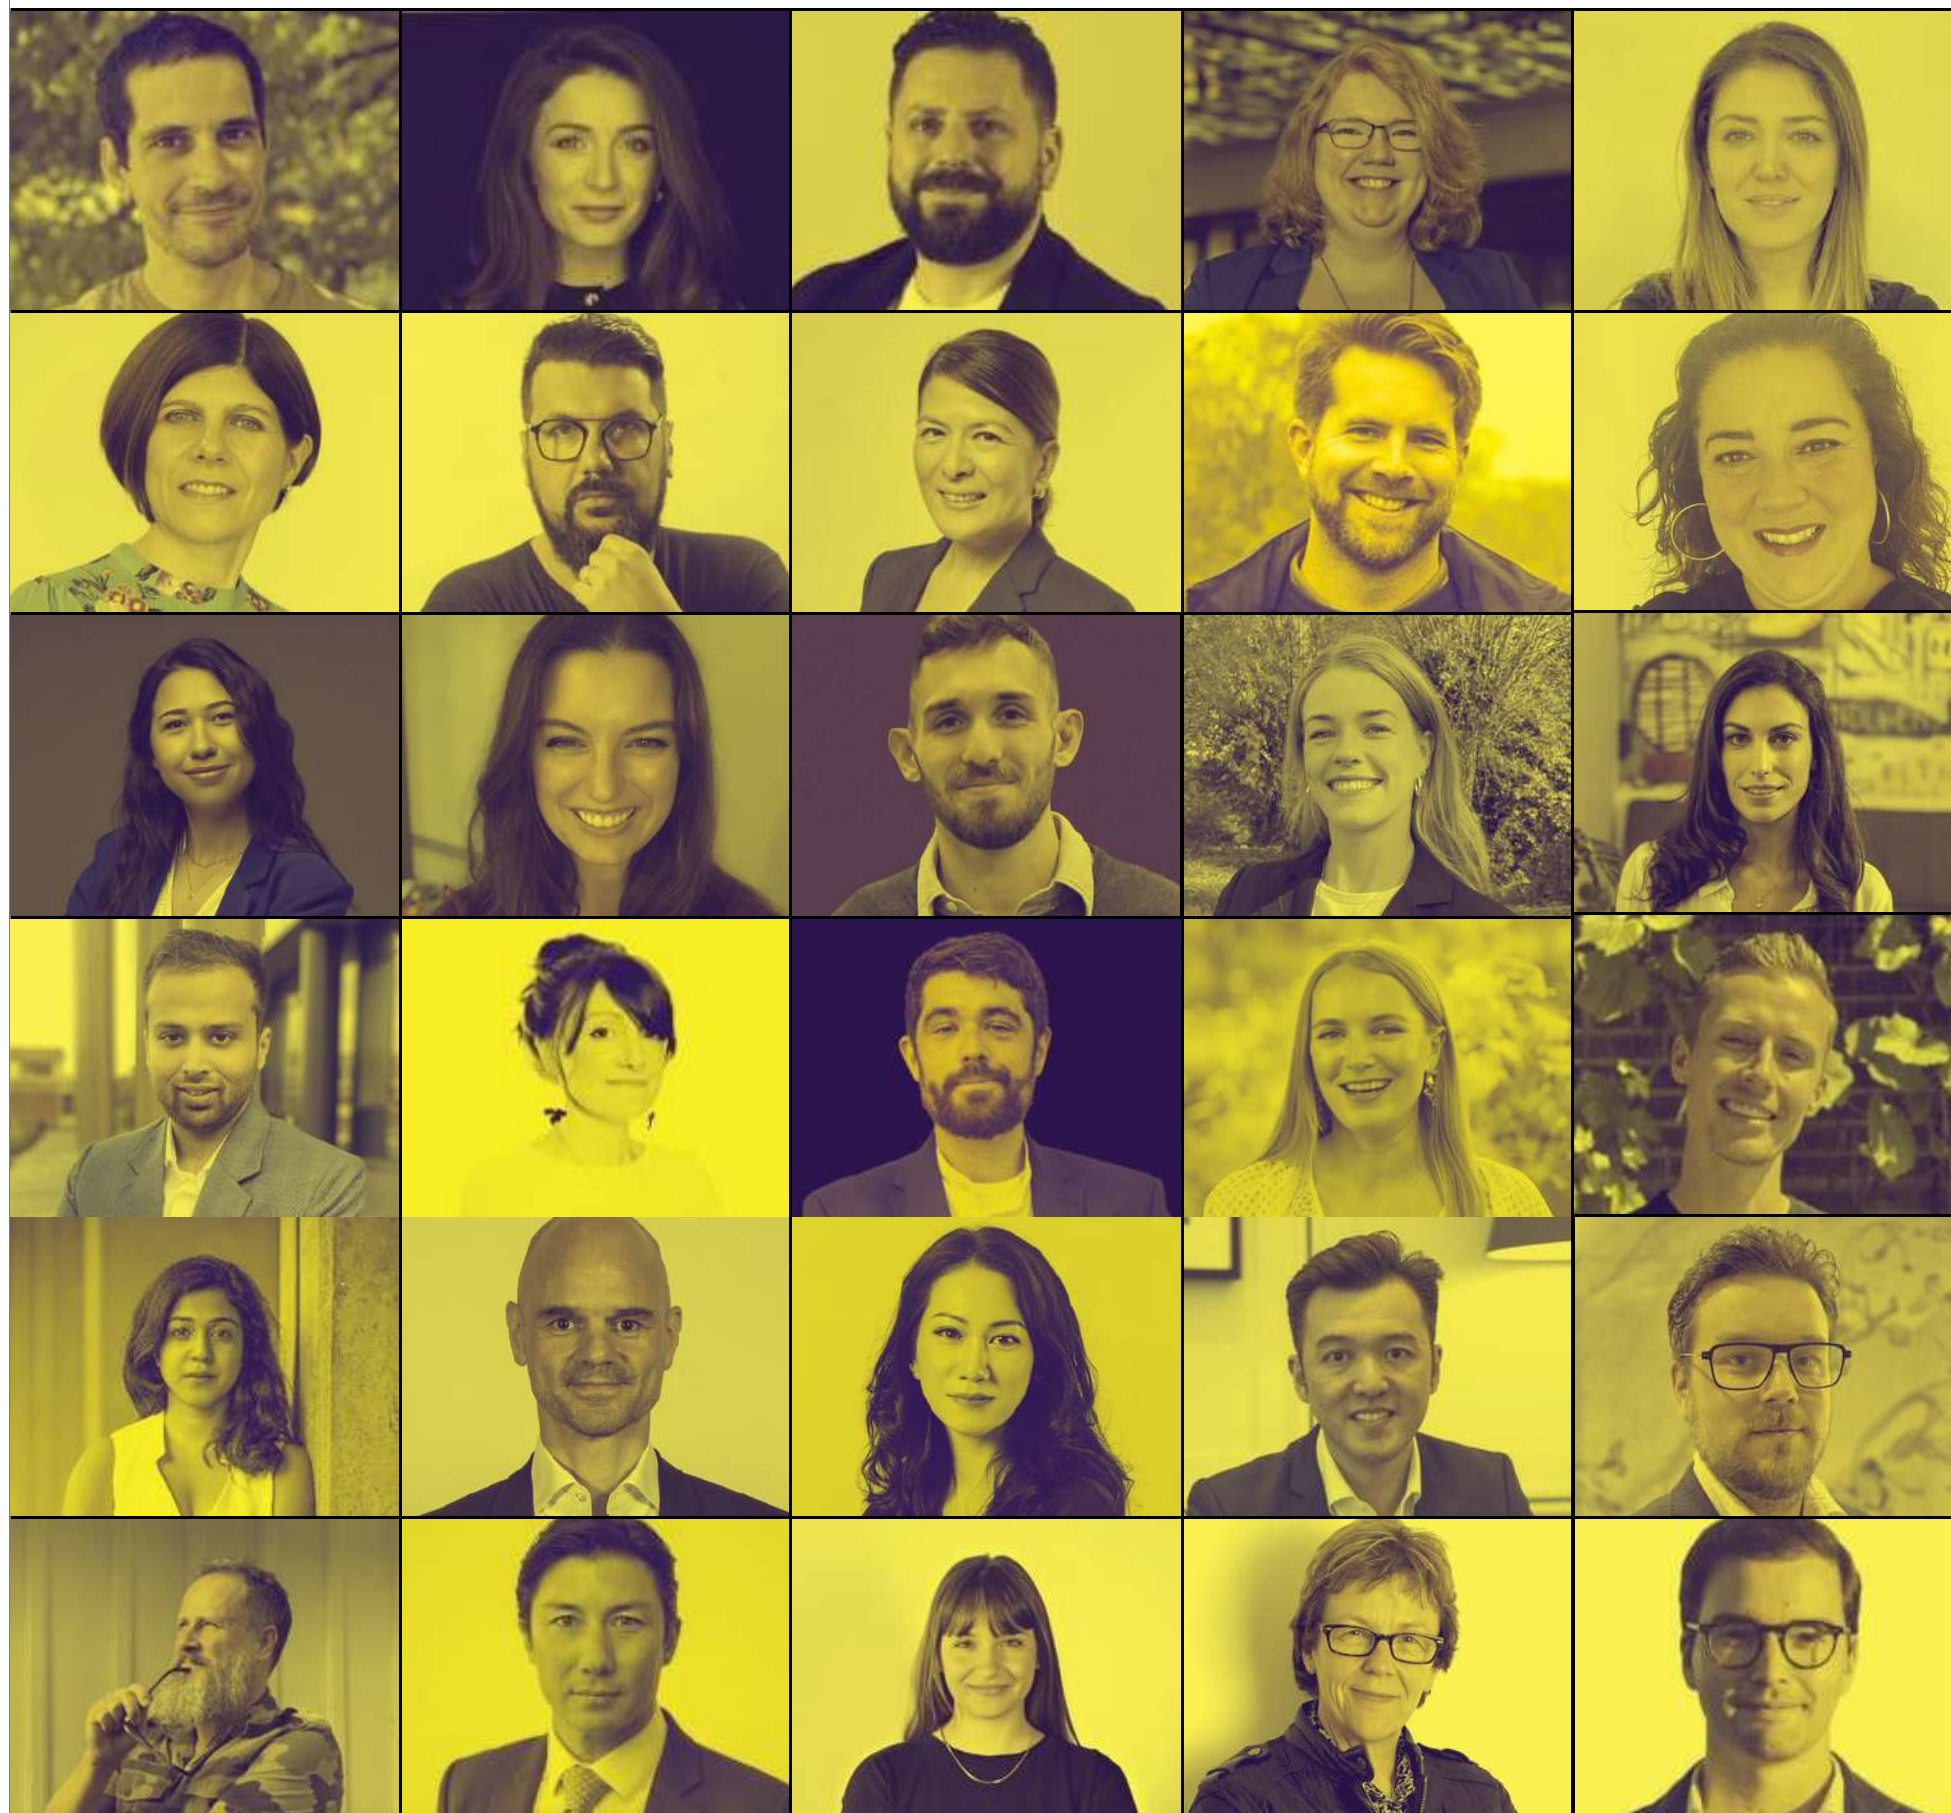

Special recognition goes to the sustainability experts from the Department of Management at the University of Turin, Italy, including Paola De Bernardi, Simona Grande, and Alberto Bertello, who played a crucial role in developing the methodology behind the sustainability score.

Credits also to our tech partner DataScouts, which provides the software to run the FoodTech Data Navigator, the world's first Data Intelligence platform for the AgriFoodTech industry. Some of the algorithms of this platform have been used extensively in our scoring system to rank the FoodTech 500 finalists insofar as the business size and digital footprint scores are concerned.

Finally, a special acknowledgment goes to all our media partners, all our FoodTech 500 ambassadors, and everyone who supported us in creating the seventh edition of the FoodTech 500.

## 2025 MEDIA PARTNERS

MEET THE  
**The FoodTech 500**  
Ambassadors

Forward Fooding's FoodTech 500 Ambassadors Program celebrates global innovators in the AgriFoodTech space. Learn about the leaders fostering a sustainable future for food. We thank them for their valuable contribution and expertise.

FORWARD  
FOODING

# ABOUT FORWARD FOODING

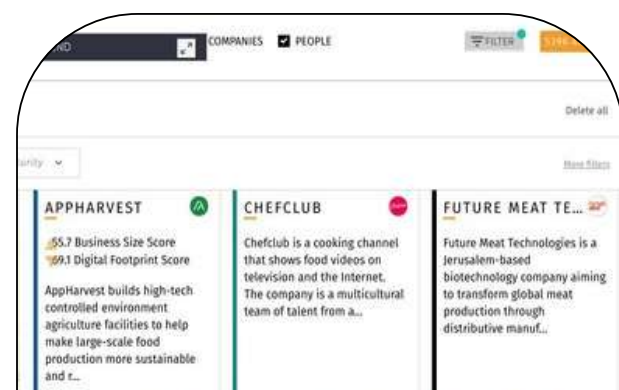

# What We Do

## POWERING THE FOODTECH REVOLUTION SINCE 2015

Forward Fooding is the world's first collaborative platform for the food & beverage industry fostering innovation via FoodTech Data Intelligence and corporate-startup collaboration.

## OUR SERVICES

### FoodTech Data

The FoodTech Data Navigator is the world's largest database of the global AgriFoodTech ecosystem. With 30,000+ actors including startups & scaleups, institutional investors, CVCs & other ecosystem players, it allows corporate executives and investors to discover and stay on top of the latest innovations and trends.

[LEARN MORE](#)

### Consulting and Scouting

Leveraging our extensive industry expertise and global AgriFoodTech network, we enable corporations, investors and other food organisations to discover and stay ahead of the latest trends and identify the right partners to engage with to step change their innovation and investment strategy.

[LEARN MORE](#)

### Startup Network

Through the FoodTech 500, the 'Fortune 500' of FoodTech and our own FoodTech Innovation Hubs across Europe, we provide exposure to leading international AgriFoodTech companies and enable our Hub members to create impact at the local level by tapping into our global network.
